Joint Depot Maintenance Program

Depot Source of Repair (DSOR)

A Guide for Acquisition Personnel

NOTES

Department of Defense (DoD) policies require that program managers seek best value in depot maintenance support and that the department maintains organic core depot maintenance capabilities. These policies are implemented through the Depot Source of Repair (DSOR) decision process.

The DSOR decision process has the potential to substantially reduce program costs. Its use helps ensure effective use of commercial and organic depot maintenance resources.

This booklet provides guidance on two elements of the DSOR decision process: (1) the contract versus organic source selection and (2) the depot maintenance interservice (DMI) review. This booklet is recommended for all acquisition and logistics personnel who plan or provide depot maintenance support.

INTRODUCTION

This booklet provides information on the Joint Depot Maintenance (JDM) Program and focuses on the Depot Source of Repair (DSOR) decision process.

The DSOR decision process considers both contract and organic sources, considers existing depot maintenance capabilities in all Military Services, and considers joint contracting opportunities. The objective of the program is to reduce weapon system costs for depot activation and recurring depot support. Early completion of the process can shorten interim contract support.

The governing directive for the JDM Program is OPNAVINST 4790.14A, AMC-R 750-10, AFI 21-133(I), MCO P4790.10B, DLAD 4151.16, Logistics, Joint Depot Maintenance Program. This joint-service regulation implements the applicable policies of DoDD 4151.18, Maintenance of Military Materiel and DoD 5000.2-R, Mandatory Procedures for Major Defense Acquisition Programs (MDAP) and Major Automated Information System (MAIS) Acquisition Programs.

The JDM Program regulation requires that all new acquisitions, including equipment modifications, and items moving to or from contract depot maintenance support be reviewed for interservice potential.

This booklet explains these specific topics:

- The contract vs. organic selection.
- The depot maintenance interservice (DMI) study.
- What, how, when, and where to submit data.
- How to get help.

Note: Web site addresses for these regulations/directives are listed in the "References/Web Sites" section of this booklet.

BACKGROUND

Before the mid-1970s, the individual services established depot maintenance capabilities with minimal interservice consideration. This practice was not cost effective. It resulted in redundant DoD infrastructure.

Since the mid-1970s, the services have cooperated in depot maintenance planning. Cooperative efforts reduced and avoided redundant facilities, and resulted in millions of dollars of cost savings and cost avoidance

What started out as an informal effort evolved into a formal interservicing program. In 1973 the Joint Logistics Commanders (JLC) established a flag-level panel to increase interservicing while maintaining the operational effectiveness of the individual services. This action was supported by the Office of the Secretary of Defense and the service secretaries.

The panel, now known as the Joint Group on Depot Maintenance (JG-DM), is composed of the flag officers responsible for the depot maintenance program in each of the Military Services and in the Defense Logistics Agency (DLA).

Major components of the JDM community are:

JOINT LOGISTICS COMMANDERS

The senior flag-level officers responsible for logistics in each of the military services and in the DLA. These commanders work together to provide joint logistics policy and guidance.

JOINT GROUP ON DEPOT MAINTENANCE

The JLC-chartered group of flag-level officers that directs the JDM Program, interprets policy, and oversees joint depot maintenance activities and initiatives.

JOINT DEPOT MAINTENANCE ACTIVITIES GROUP

Staffed by employees of the four services, this organization supports joint service functions and initiatives under the JG-DM.

MAINTENANCE INTERSERVICE SUPPORT MANAGEMENT OFFICE

Each service's functional office responsible for over-seeing and implementing joint depot maintenance.

MAINTENANCE INTERSERVICE SUPPORT OFFICE

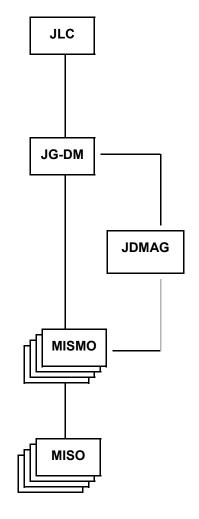

Figure 1 JDM Program Organizational Structure

Located in subordinate commands and centers, these offices coordinate joint depot maintenance (interservicing) activities.

DSOR DECISION PROCESS

The DSOR decision process is a mandatory activity in logistics support planning for systems and equipment that will require depot maintenance. The DSOR decision process consists of two elements, normally performed sequentially:

- 1) The first step is the organic versus contract source determination. This determination is made by the acquiring Military Service using a service-approved decision analysis. Primary considerations are core and the contract source limitation on depot maintenance currently provided in statute. DoDD 4151.18 and DoD 5000.2-R provide guidance for this process.
- 2) The second step in the DSOR decision process is consideration of interservice depot maintenance support. This step, known as the DMI review, is required regardless of the outcome of the contract versus organic selection. The DMI review is prescribed in the JDM Program regulation.

DoDD 4151.18 requires that DSOR assignments shall be made by the acquiring DoD component using the DSOR assignment decision logic process. Therefore, until program managers have completed this process, they should not make binding commitments or obligate funds for other than interim depot support. DoDD 4151.18 also requires the Military Services to maintain a core depot maintenance capability within the DoD infrastructure to meet military contingency requirements and to consider interservice depot maintenance support as well as joint contracting.

The JDM Program regulation requires completion of the DMI review for the following:

- New weapon system, subsystem, major end-item, component, or support equipment acquisitions (including modifications to existing items), regardless of the investment required.
- Existing depot repair programs planned for transition from contract to organic support or from organic to contract support, regardless of the investment required or the value of the program.
- Existing interservice depot repair programs planned for termination, regardless of reason, investment/cost required, or the value of the program.
- Existing depot repair programs for which a planned expansion of capability requires an additional capital expenditure of \$1.5M or more.
- Existing depot repair programs planned for relocation, if the associated total expenditure required is \$1.5M or more.

To compile and record data, the DMI review uses a standard set of forms. The forms may be found in the JDM Program regulation, on the JDMAG web site, or your MISO or MISMO can provide them. These forms, and the data they convey, are listed and described later in this booklet under "Data Requirements" and "JLC Forms." Completed examples are also provided.

A software program called Automated DMI Data Submission (ADDS) simplifies preparing the JLC forms. ADDS is described later in this booklet.

The DMI review is initiated by submitting JLC Forms 27 and 44 through your MISO and MISMO to JDMAG.

For new acquisitions, send the forms as soon as possible, but not later than 90 days after award of the Engineering and Manufacturing Development (EMD) contract. In accelerated programs, send the forms not later than 90 days after the equivalent of the EMD contract award.

For existing items, submit JLC Forms 27 and 44 when the investment requirement is approved and budgeted for nondevelopmental items, or when the decision is reached for workload relocations.

JDMAG conducts its studies on the basis of the data submitted and other research. At the conclusion of a study, JDMAG recommends a DSOR assignment to all the services (via the service MISMOs).

When the services concur, JDMAG formally announces the joint-service DSOR decision via the MISMOs. The decision, which is binding on all services, results in one or more maintenance activities or a contract source being assigned as the DSOR.

The MISMOs direct their services, via the MISOs, to implement the DSOR decision. The MISOs, in turn, notify program offices and other offices responsible for implementing DSOR assignment decisions.

The following chart is an overview of the process used to select a DSOR.

Note: A briefing on the DSOR Decision Process is available on the JDMAG web site.

DATA REQUIREMENTS

The data required for a DMI study depend on the level of study that JDMAG performs. The data, normally provided on JLC Forms 27 through 32, and 44, are divided into two types: introductory data, and program and technical data.

INTRODUCTORY DATA

JLC Forms 27 and 44 contain introductory data.

- JLC Form 27 identifies the system, equipment, or item, the depot support requirements, the depot need date, acquisition objectives, and key points of contact.
- ◆ JLC Form 44 contains preliminary planning information for the depot maintenance requirement, including organic versus contract selection, acquisition schedule, maintenance concept, and maintenance requirements.

Once a DMI candidate is introduced, JDMAG works with the introducing service to plan the DMI study. JDMAG establishes time frames and data requirements that are compatible with the service's acquisition/logistics milestones.

PROGRAM AND TECHNICAL DATA

JLC Forms 28 through 32 contain program and technical data that define depot support requirements.

The information on JLC Form 28 is mandatory; it identifies the system, equipment, or items to be repaired or recovered at depot level. All depot repairable assemblies and subassemblies that make up the system, equipment, or item should be listed on this form. The listing should be in a logical, top-down breakdown order that portrays configuration.

JLC FORM 32 (continued)

Data formats other than the JLC Form 28 are acceptable, provided they contain the necessary information.

Depending on the level of study that JDMAG determines appropriate, JLC Forms 29 through 32 may also be required. The information on these forms identifies technical publications, engineering drawings and schematics, new and peculiar support equipment requirements, and projected workloads.

JDMAG may also need detailed technical data such as test requirements, repair requirements and processes, quality requirements, etc.

DATA SENT BY CANDIDATE DEPOTS

When JDMAG conducts a comparative analysis, each candidate depot submits a proposal to describe its existing capability and capacity for the workload under study. The proposal also lists additional requirements to build full capability and capacity, and provides estimated recurring repair costs.

From information provided by acquisition program offices, JDMAG furnishes each candidate depot the program and technical data necessary to prepare its proposal to supply the required depot support.

The proposal that is submitted by a candidate depot is called a depot support proposal (DSP). It consists of JLC Forms 33 through 41, and 48 through 51. Candidate depots may also be asked to provide other forms and data.

AUTOMATED DMI DATA SUBMISSION

Automated DMI Data Submission (ADDS) is a computer program used by program offices and acquisition-logistics personnel to record and send introductory data, and program and technical data, for DMI studies. ADDs also is used by depots to record and submit DSPs to JDMAG.

ADDS eliminates the necessity to enter redundant data and perform manual data calculations.

Many ADDS on-screen images are the blank JLC forms. Users can view and print completed or partially completed JLC forms.

ADDS, which has an on-screen user's manual and a help feature, permits users to send data to JDMAG via e-mail or diskette.

ADDS runs on IBM compatible personal computers with at least two megabytes of hard-disk storage space, 640 kilobytes of random access memory, and a diskette drive.

JDMAG sends each candidate depot a copy of ADDS DSP when it needs to prepare a DSP.

Ask your service MISMO or command/center MISO for a copy of ADDS INTRO or request a copy via the JDMAG web site, http://www.jdmag.wpafb.af.mil.

QUESTIONS & ANSWERS

What are the consequences of not initiating the DSOR decision process?

A: Failing to initiate the DSOR process could result in program delays. It may also waste program funds to develop a depot capability that already exists or miss an opportunity to consolidate contracts (joint contracting).

: My program is unique to my service and the systems/ equipment are not multi-service used. Does the DSOR decision process apply?

A: Yes. As stated in the JDM Program regulation, consideration of interservice support is mandatory for all "new start" programs that will require depot maintenance and for existing depot programs planned for movement from one source to another.

What is the "cost threshold" for the DSOR decision process?

A: There is no cost threshold for submission of "new starts" to the DSOR decision/DMI review process. The cost threshold only applies to existing workloads for which additional expenditure of \$1.5M or more is anticipated.

How does my program get a waiver from the DSOR decision process?

A: There are no provisions for a waiver in the JDM Program regulation. There are procedures available to shorten the time required to achieve a DSOR decision for valid, verifiable reasons. Seek assistance from your MISO, MISMO, or JDMAG.

Q: How long does it take to get a DSOR decision?

A: The length of time depends on the complexity of the weapon system, its depot support requirements, program milestones, and the timeliness and quality of your data input. The time required varies from about six weeks to six months.

What can my program office do to ensure a successful and timely DSOR decision process?

A: Here is what you should do:

- Initiate the process as early as possible prepare and submit JLC Forms 27 and 44 to JDMAG via your MISO and MISMO.
- Involve your MISO early and keep him or her informed of program changes.
- Identify valid program milestones on JLC Form 27 and make sure the DSOR decision process dovetails with your program planning requirements and contract deliverables for program and technical data. Inform your MISO, MISMO and JDMAG when schedules change.

- Submit the forms and support data according to the milestones you set.
- Provide logistics support and maintenance planning information to JDMAG as soon as available.

Are handwritten JLC forms acceptable?

A: Yes, but machine printing is preferred. The ADDS program, described in this booklet, is the easiest way to complete JLC forms.

How are candidate depots chosen for DMI studies?

A: Each service has a unique approach. The selection is usually based on factors such as capacity, capability, facilities, assignment of similar workloads, and missions. The MISMO is a good contact for information in this area.

Who is responsible for seeing that a work load actually transitions to the assigned DSOR?

A: Once the DSOR decision is made, the MISMO is responsible for assuring implementation.

JLC Form 50: Unit Repair Cost Comparability Worksheet

JLC Form 51: Training Costs

Note: JLC forms may be viewed and printed via a link on the JDMAG Web site. Instructions for completing the JLC forms are printed on the reverse of each form and are also available via the JDMAG Web site.

COMPLETED JLC FORMS

On the following pages are seven completed samples of JLC forms you may be required to fill out to initiate and submit data for the DMI study. These forms are: JLC Form 27, JLC Form 28, JLC Form 29, JLC Form 30, JLC Form 31, JLC Form 32, and JLC Form 44.

As stated earlier, blank forms with instructions can be found in the JDM Program regulation, or can be obtained from MISMOs or MISOs, or from the JDMAG web site. You may also use ADDS software to prepare and submit data. ADDS is also available on the JDMAG web site.
